Summary

I love to solve business problems by making use of the technical prowess we have available to us. Being free of a set of frameworks and exploring different things to make sure the problem is solved is what I like the most. Below are some of the technologies I have worked on and I am always in the process of learning more.

Work Experiance

Function Web developer and designer(Spark Founation)[Spark foundation certificate](#)

Created a simple website where payment gateway have to be integrated with following feature where there will be a simple donate button the user will land on payment page where user can select the amount to be paid and the invoice will be generated and email will be sent to the user.

PROJECTS

StockPro— A virtual stock trading game app - React Native, Node

Written in Js on node environment in react native, and backend using the express framework, this gaming app uses the stock market as gaming/betting using game money.

Shipit— A logistics and transportation company Webapp

Using React Native in frontend and Express and Graphql in the backend, this cross-platform mobile app provides a way to make your goal resolutions top notch and make them fun to do, and let users compete with friends and peers- still in progress.

SOOV— A multi-user productivity mobile app - React Native, Express, GQL.

Using React Native in frontend and Express and Graphql in the backend, this cross-platform mobile app provides a way to make your goal resolutions top notch and make them fun to do, and let users compete with friends and peers- still in progress.

Macrocentrik(ongoing college project)- A MultiPurpose Platform with multiple integrated services - React, Webpack, Express, NodeJs, MongoDB
